Experience

Oct, 2017 – Feb, 2019
Full Stack Web Developer, *University of Bradford*, Bradford, UK.
- Developed several funded projects from idea to functional prototype, which would get polished through iterative development and liaising with the clients throughout.
- Met with clients to gather requirements and develop concepts, established roadmaps, ensured milestones were met.
- Lead a team of students and assisted them with their final year projects, which were incorporated into our team's main project.

Education

Oct 2013 – Dec 2017
BSc Computer Science for Games, *University of Bradford*, First-class honours, *Bradford.*

Skills

Languages: JavaScript, Python, PHP

Frontend: HTML5, CSS3, CSS Grid/Flexbox(responsive design), SASS, AJAX, Tensorflow.js, jQuery, Bootstrap

Backend: Node.js, Express.js, MongoDB, Flask

Other: Linux, Bash, Git, cURL

Projects

2018 - 2019
MotiVar.
Full stack web project that reconstructs a 3D avatar of the user from several images and metric measurement input to assist in dealing with self-perception and weight loss. Acquired experience in combining multiple different areas of web development to create an efficient input to output pipeline while minimizing overhead.

2017 - 2018
Ctsim.
Full stack web project that aims to simulate the conditions new health professionals will experience when conducting CT scans. Learned to develop the user experience of a website from iterative user feedback.
